

ManageEngine AssetExplorer

IT Asset Management: Simplified and Affordable

AssetExplorer is a complete, end-to-end Asset Management software that offers advanced hardware and software management across Organization, Software Asset Management, ensuring License compliance, software usage, IT purchase tracking, asset lease management, asset contracts and reports on various asset management activities.. AssetExplorer is easy-to-install, easy-to-use, and works right out-of-the-box.

AssetExplorer is specialized software and hardware asset management solution designed for organizations whose needs for accurate, comprehensive IT asset reporting and trouble-free management aren't met by enterprise-oriented framework products or less sophisticated inventory tools.

- | | |
|---------------------------|--|
| Easy to install and use | - Roll into production in days, not months |
| An Integrated Solution | - Out-of-the-box, OpManager includes WAN monitoring, Server management, and Application management functions |
| Adaptive management | - Manage devices from multiple vendors |
| Affordable to Buy and Use | - Low Total Cost of Ownership |

Software Inventory

- * Discover and identify the software installed across your organization network
- * Stay compliant with license agreements by uncovering unlicensed copies of installed software
- * Identify what's newly installed and potentially harmful on your network
- * Track purchasing details linked to software licenses
- * Maintain compliance in virtual environments by easily identifying virtual operating systems and, in Microsoft environments, their hosts

Hardware Inventory

- * Discover all the PCs and hardware deployed across your network
- * Analyze system characteristics such as processor type and speed, memory, disk space, network card address, manufacturer, serial number, and more
- * Plan for technology migrations by evaluating PC configurations and capabilities
- * Track unlimited purchasing information associated with deployed hardware such as PO details, lease numbers and expiration dates, location information, and more
- * Control the hardware life-cycle by determining which systems needs to be upgraded or replaced
- * Troubleshoot remote PC issues by extending machine configuration data to support staff

IT Purchasing and Contracts

- * Import unlimited purchase details at the time of purchase or after assets are deployed
- * Seamlessly reconcile purchasing information with inventoried assets
- * Track both summary-level and detailed purchasing information associated with your purchase orders
- * Assign and allocate purchases to individuals and organizational units or groups
- * Keep track of expiration dates for service agreements, maintenance contracts, and leases

License Compliance

- * Stay compliant with license agreements by detecting unlicensed copies of installed software
- * Calculate true-up costs linked with your current compliance status
- * Enforce peak usage limits for concurrently licensed applications
- * Maintain compliance in virtual environments by easily identifying virtual operating systems and, in Microsoft environments, their hosts

Software usage

- * Determine how often and by which staff are specific applications are being used
- * Identify unused and underutilized licenses
- * Monitor the use of unauthorized, harmful or "nuisance" applications
- * Collect detailed software usage statistics including start time, stop time, idle time, and peak usage
- * Track usage statistics for applications launched via Windows Terminal Server or Citrix XenApp server

Remote Control

- * Centralize management and increase performance.
- * Perform active maintenance on remote systems.
- * Hides its remote control agent when not in use in order to maintain the highest level of security with the least amount of impact.
- * Easily increases customer satisfaction for your systems outside the corporate firewall.
- * Is optimized to give you the best possible performance.
