Samsung SAFE and KNOX Devices

The Challenge

Today’s enterprise is flooded with mobile devices; and trends such as COPE and BYOD are helping contributing for increased productivity. At a basic level it is more convenient for users to access the mobile for work purposes irrespective of the location, and at the strategic level there won’t be any loss on productivity for enterprise.

The concern is the growing mobile users pose a greater risk. Since it involves sensitive corporate data sitting in employees’ pockets, chances of device theft/stolen would pose a significant data loss for the organization.

What Enterprise can do?

Enterprises need to adopt solution that can help the IT staff to manage the mobile devices in every aspect ranging from device enrolment to wiping corporate information. Hence, MDM (Mobile Device Management) is no longer a choice but a crucial necessity.

A single holistic integrated MDM solution is the order of the day for organizations. This enables organization to manage entire mobile device routine that can tackle the issue effectively and save operational costs for the company.

How Mobile Device Manager Plus fits in your frame work?

Mobile Device Manager Plus offers plethora of features that enables IT staff to manage devices ranging from Device Enrolment to Security Management.

Mobile Device Manager Plus - Highlights

Smarter Mobile device enrolment

- Enrol the device Over-the-Air (OTA) for a smarter device management
- Enrol any number (bulk) mobile devices in a single instance using a CSV file
- Authenticate enrolment with a One-Time passcode and/or user’s Active Directory Credential
- Enrol and manage multiple device for the same user
- Enrol corporate and employee owned device simultaneously

Sophisticated Profile Management

- Configure policies in order to provide access to enterprise resources
- Restrict the use of certain features that may pose threat like Camera, YouTube, Safari browser etc.
- Configure email, contacts, Wi-Fi and VPN profiles over-the-air (OTA)
- Employ your BYOD rules by segregating groups of device based on hierarchy, department, etc.

Mobile Device Management support

- Monitor devices for an updated information
- Diagnose device, user or application issues from a centralized platform
- Reset the forgotten passcodes
- Update the configuration settings in real time
- Enable users to enroll device with a self-service portal

High End Device Security Management

- Configure passcode from simple to complicated like length, alpha numeric, etc. for a better protection
- Enforce device restrictions on features like enabling/disabling icloud, Passbook, iTunes, etc.
- Remote Lock the device to prevent misuse of misplaced/lost devices
- Prevent data loss/theft by performing complete wipe the device that leaves no trace
- Prevent corporate data loss by removing only the business information leaving the personal data like contacts, photos, etc.
- Retire the device when an employee leaves the company
- Enables to locate the geographical location of the managed mobile device

Asset tracking with configurable reports

- Track mobile devices details like certificates, installed apps, memory usage, etc. and stay up-to-date
- Get granular level detailed reports on hardware and software inventory
- Create out-of-the-box reports on Apps by Devices, Devices by Model, etc.

Mobile Application Management

- Manage and distribute apps when required for both in-house and App Store
- Integrate with Apple Volume Purchase Program (VPP) to distribute commercial apps seamlessly
- Prevent unauthorized viewing of sensitive documents or accidental deletion with App lock.
- Advertise Apps on App Catalog and make the user choose to install themselves
- Segregate Blacklist and Whitelist of Apps
